

CHEMISTRY, MEASURED

RSI Chemical Programs

Exactly the chemistry your water needs. Not a drop more.

TWO QUESTIONS WE ASK BEFORE ANY ADDITIVE

Is this the best product for the treatment goal, on this equipment, with this water?

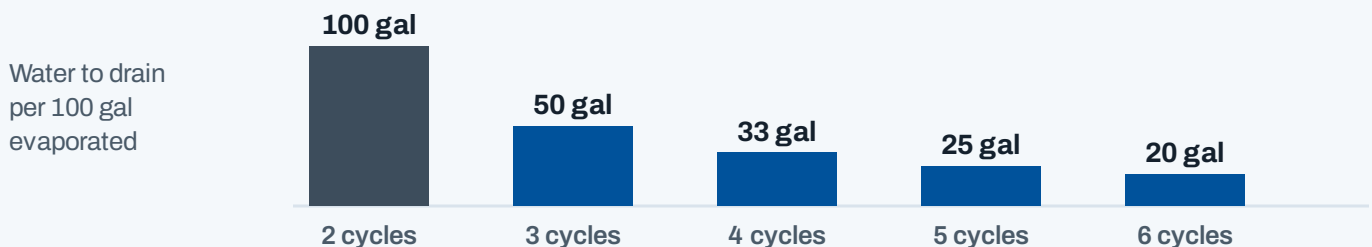

Is it the one with the least environmental impact that still gets there?

Both, or it does not go in your system.

BEHIND EVERY RECOMMENDATION

- ✓ Built from your equipment and your water
- ✓ A chemistry and QC team second to none
- ✓ Independently tested to outperform
- ✓ Many RSI products are food-grade
- ✓ Our inhibitor is certified for drinking water
- ✓ Month to month. The result earns the renewal

WHY CHEMISTRY DECIDES YOUR WATER BILL

Blowdown = evaporation ÷ (cycles – 1): every step up in cycles is water that never goes to drain. How high your system can safely cycle is set by its chemistry and your makeup water, which is what an RSI evaluation determines.

Free Evaluation of Your System

Send us your water and tell us your equipment. We will tell you what it actually needs, and we will say so when the answer is less chemistry rather than more.
