

RSI CHEMICAL PROGRAMS

Your water. Your chemistry.

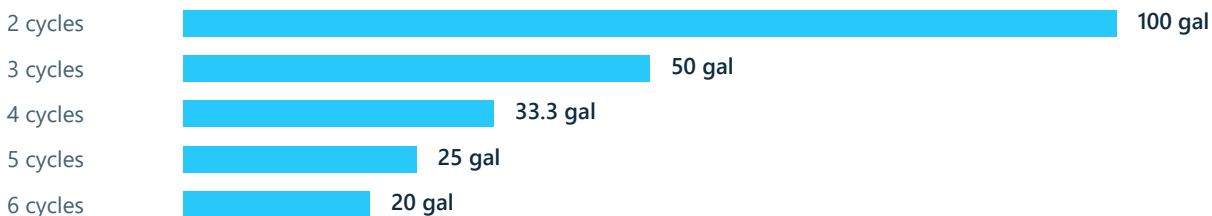

Start with the system. Set treatment goals around its water and operating conditions.

Concept imagery • Illustrative, not RSI equipment or a customer site.

SEE THE WATER BALANCE

A higher achievable cycle target can reduce tower blowdown. Water quality and treatment determine the right limit.

Blowdown per 100 gallons evaporated. Calculated: $E / (\text{cycles} - 1)$. Steady operation; excludes drift, leaks and other losses. Illustration, not a savings forecast.

Industry context and calculation: DOE tower management; EPA WaterSense, \$6.3.
