COOLING TOWER BALLS™

Less sunlight. A smarter algae strategy.

A floating cover helps reduce the light available for algae growth.

Concept imagery; not a photograph of RSI equipment or a customer site.

A practical physical measure at the water surface.

RSI Cooling Tower Balls rise and fall with the water level. Their role is straightforward: shade exposed water as part of a coordinated tower-care program. Begin with the area you need to cover.

Floating coverage

The cover follows changes in the water level.

Outdoor material

RSI specifies UV-stabilized HDPE for exposure to sunlight.

Simple starting point

Estimate coverage at about 10 balls per square foot.
