

FILTRATION WITHOUT THE FUSS

RSI High Efficiency Filter

Two pipes, one pump. No backwash, no floor drain.

WHY MOST FILTRATION GETS SKIPPED

Backwash cycles, floor drains, and an operator to babysit it all.

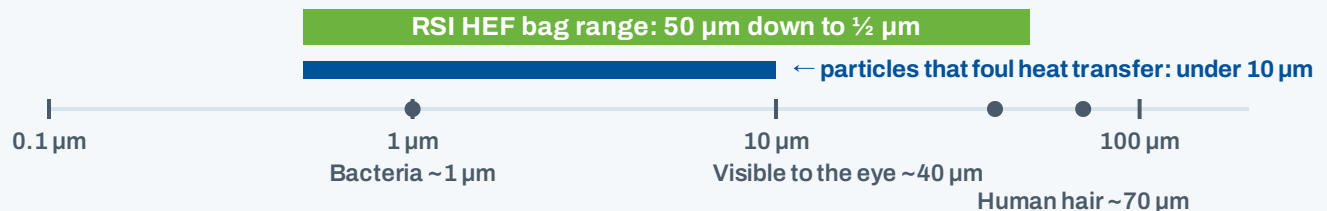

Meanwhile the particles that actually foul heat transfer surfaces are smaller than 10 microns.

We could not buy a simple one, so we built it.

WHAT IS ON THE SKID

- ✓ A premium GRUNDFOS pump, the only major moving part
- ✓ EATON stainless steel bag filter housing
- ✓ No backwash, ever
- ✓ No floor drain needed
- ✓ Two-pipe installation on a side stream, about 5% of flow
- ✓ Building automation outputs available

WHAT IT CATCHES

Models: HEF-100 — 100 GPM, 2" · HEF-150 — 150 GPM, 3" · HEF-200 — 200 GPM, 3" · stainless housing · any size on request. Reference sizes above are typical published values, shown for scale.
