

SAME CHEMISTRY. NO DRUM.

RSI Solid Chemistry

Proven RSI treatment, as a solid. Nothing to spill.

WHAT A LIQUID PROGRAM REALLY COSTS

A liquid drum is heavy, bulky and mostly water. You pay to ship it, store it, lift it and clean up after it.

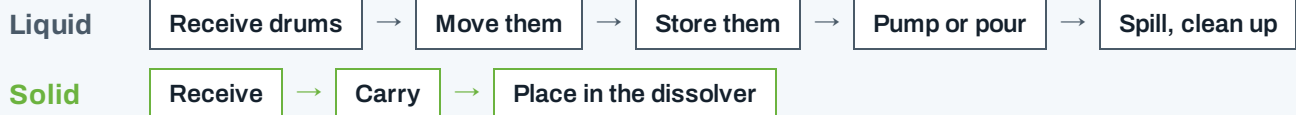

Every handling step is another chance for a splash, a spill and a report.

Take the drum away and both problems leave with it.

WHAT CHANGES ON DAY ONE

- ✓ Nothing to spill, splash or hose down
- ✓ A fraction of the storage footprint
- ✓ The handling liability goes away with the drum
- ✓ Light and easy to carry to the point of use
- ✓ Simple to ship and simple to store
- ✓ Potential LEED credits

HANDLING, LIQUID VERSUS SOLID

The same proven chemical combinations, manufactured as a solid concentrate and applied on site with RSI's patented dissolving equipment. Cooling towers, boilers and closed loops all run on it.

Create a Safer Environment

Tell us what you run today. We will show you the solid equivalent, and what it takes out of freight, storage and handling.
