

RSI WATER SOFTENERS

Know the hardness. Plan the protection.

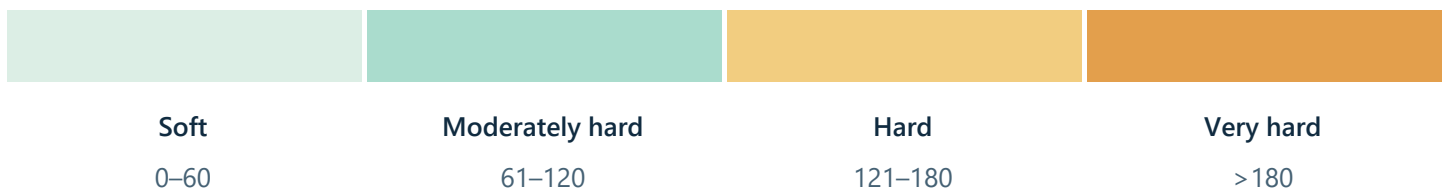

Remove calcium and magnesium hardness before it becomes part of your operating challenge.

Concept imagery • Illustrative, not RSI equipment or a customer site.

A WATER TEST MAKES THE DIFFERENCE

Cation exchange removes hardness. Where hardness limits tower cycles, softening may help; regeneration uses water and salt.

Hardness in mg/L as CaCO₃; USGS classification bands (equal-width categories, not a scale). Softening does not remove every scale-forming constituent.

Hardness bands: USGS. Softening context: EPA WaterSense; DOE tower management.
