

THE FOUR PROBLEMS

Why Water Treatment?

Corrosion, scale, bacteria and algae. Every untreated system has all four.

WHAT IT PROTECTS

Sensible water treatment is an investment in your equipment.

It is also an investment in your employees and your community.

Protect the property and the people around it.

THE FOUR YOU ARE TREATING FOR

- ✓ **Corrosion** — what happens naturally when water and metal meet
- ✓ **Scale** — dissolved minerals precipitating out of the makeup water
- ✓ **Bacteria** — the one way a cooling system becomes a liability
- ✓ **Algae** — photosynthetic growth wherever there is light and water
- ✓ Electrochemical oxidation, and galvanic attack between dissimilar metals
- ✓ Costs efficiency, and hides corrosion underneath it
- ✓ Keeping colonization to a minimum is a must
- ✓ Controlling it is part of any real program

RSI looks at your specific equipment and your incoming water quality, and makes an exact recommendation from what we find.

Month to Month. We Have to Keep You Happy.

RSI offers service on a month-to-month basis — no long lock-in to justify the result.
