

FOOD GRADE

RSI-007 Food Grade Inhibitor

Corrosion, scale and rust control in one food-grade liquid.

WHAT UNTREATED PROCESS WATER COSTS YOU

Corrosion attacks every metal normally found in a process loop.

Iron fouling discolours the water and spreads contamination.

RSI-007 addresses both.

WHAT RSI-007 DOES

- ✓ Exceptional corrosion protection on all metals normally found in process loops
- ✓ Controls scale formation in process loops
- ✓ Clears iron-fouled process water in a matter of hours
- ✓ Renders the iron and contamination harmless
- ✓ Supports biofilm control
- ✓ Safe, food-grade liquid product

RSI-007 passivates new galvanize in a matter of days, which eliminates the prolonged, tedious and expensive passivation process normally used. Ask to see the actual before and after pictures from systems already running it.
